

Types of Flooding

Flood plains

Areas predicted to be covered by flood water during heavy rain.

Learn more >

Flood prone areas

Low-lying areas where water can become trapped and collect during heavy rain, especially if the stormwater outlet is blocked or reaches capacity.

Learn more >

Overland flow paths

The route water will naturally take across the ground during heavy rain when the stormwater network is at capacity, or where there is no stormwater network.

Learn more >

Coastal inundation

Coastal areas predicted to be covered by sea water during large storms.
