www.ecan.govt.nz

Dear Sir/Madam

Thank you for submitting your property enquiry from our Listed Land Use Register (LLUR). The LLUR holds information about sites that have been used or are currently used for activities which have the potential to cause contamination.

The LLUR statement shows the land parcel(s) you enquired about and provides information regarding any potential LLUR sites within a specified radius.

Please note that if a property is not currently registered on the LLUR, it does not mean that an activity with the potential to cause contamination has never occurred, or is not currently occurring there. The LLUR database is not complete, and new sites are regularly being added as we receive information and conduct our own investigations into current and historic land uses.

The LLUR only contains information held by Environment Canterbury in relation to contaminated or potentially contaminated land; additional relevant information may be held in other files (for example consent and enforcement files).

Please contact Environment Canterbury if you wish to discuss the contents of this property statement.

Yours sincerely

Contaminated Sites Team

INV 10897 **Detailed Site Investigation - Rosemerryn Subdivision, Lincoln**
Tonkin and Taylor Ltd - Detailed Site Investigation
31 May 2012

Summary of investigation(s):

Fulton Hogan proposes to redevelop and subdivide the former farm located at 53 Edward Street, Lincoln for residential use, including areas for recreation. The recreation areas will also be used, at least in part, for stormwater management and conveyance.

Fulton Hogan engaged Tonkin & Taylor Limited (T&T) to undertake a phased investigation of the site to meet with the requirements of the National Environmental Standard for Assessing and Managing Contaminants in Soils to Protect Human Health [NES] (MfE, 2012). These in turn meet the requirements of Selwyn District Council, the local authority responsible for consenting the earthworks and subdivision of the land.

T&T searches indicated that the land was used for farming since at least 1925. Site walkover inspections and interviews with people associated with the farm, identified a number of hazardous activities and industries on the land. These activities include landfilling, livestock dips and spray races, use of persistent pesticide bulk storage and use (including glass houses and orchards), and the tanked storage of fuels. Relative to the whole development, these activities have generally occurred within a limited area centred around the former farm house, woolshed and ancillary buildings; the exception being an area of landfilling/stockpiling of waste in a northern paddock of the development area.

The interviews indicated that there was a sheep dip located within the woolshed. Its precise period of operation could not be ascertained but it is presumed it ceased in the 1960s. Interview information also indicated that it was common practice to burn and bury wastes on site at two locations [labelled old waste pit and new waste pit in the T&T desk study report] and that liquid wastes, including sheep dip, were disposed of directly into Townsend Drain (crosses the centre of the site and immediately adjacent to the woolshed). T&T noted that this watercourse was dry at the time of their site works [February and April 2012] and interviews indicated that it has been dry for at least a decade.

During April 2012 T&T undertook a programme of targeted and systematic soil sampling across the whole development. The sampling programme and subsequent laboratory testing regime met with the requirements of the NES and associated publications. The laboratory data was correctly compared with either the applicable residential or recreational Soil Contaminant Standards from the NES or Soil Guideline Values selected in accordance with the NES and associated publications. Only discrete soil samples were collected during the detailed site investigation.

Test pitting undertaken in the former woolshed did not locate the sheep dip. A number of soil samples were taken from this area as detailed below.

43 soil samples were collected systematically from the outer paddocks of the overall development area and analysed for heavy metals, organochlorine pesticides [OCPs] and multi-residue pesticides. A single soil sample was analysed for polycyclic aromatic hydrocarbons [PAHs]. Laboratory analytical results from these samples did not exceed applicable standards or guideline values.

57 soil samples were collected and subjected to analysis as follows:

- 57 analysed for heavy metals
- 27 analysed for OCPs
- 6 analysed for multi-residue pesticides
- 15 analysed for PAHs
- 13 analysed for total petroleum hydrocarbons
- 5 analysed for asbestos and BTEX (benzene, toluene, ethylbenzene and total xylenes)

BTEX and asbestos were not detected. Levels of cadmium, copper, and zinc were below the applicable standard or guideline value, but greater than background levels.

Contaminated soil exceeding acceptable levels were identified at areas of concern as follows:

- [1] old waste pit – arsenic exceeding residential and recreational standard;
- [2] creek bed [i.e. Townsend Drain] – arsenic, Aldrin and Dieldrin exceeding residential standard;
- [3] new waste pit - arsenic exceeding residential standard;
- [4] house – lead exceeding residential standard;
- [5] woolshed - arsenic exceeding residential and recreational standard.

NB: Further works and investigations have occurred at the areas identified above. The remainder of the subdivision was found to be acceptable for residential land use with regard to potential contamination.

T&T noted that this watercourse was dry at the time of their site works [February and April 2012] and interviews indicated that it has been dry for at least a decade.

INV 12787

Desk-Based Ground Contamination Assessment Plan Change 7 Area

Tonkin and Taylor Ltd - Preliminary Site Investigation

1 Jan 2011

Summary of investigation(s):

Selwyn District Council requested a desk-based study of sites of potential contamination within the Plan Change 7 area. Plan Change 7 is located around the towns of Rolleston and Lincoln and proposed to rezone these areas for standard residential land use on 58 existing 'Living Z' and Deferred Living Z' land parcels in 2011. Environment Canterbury and Selwyn District Council records were reviewed along with historical aerial photographs and certificates of title. Site walkovers were also conducted. Potential sources of contamination were identified in several areas and these have been assigned a site number on the Listed Land Use Register. The majority of the areas investigated were found to be in pasture for most of their recent history.

Disclaimer

The enclosed information is derived from Environment Canterbury's Listed Land Use Register and is made available to you under the Local Government Official Information and Meetings Act 1987.

The information contained in this report reflects the current records held by Environment Canterbury regarding the activities undertaken on the site, its possible contamination and based on that information, the categorisation of the site. Environment Canterbury has not verified the accuracy or completeness of this information. It is released only as a copy of Environment Canterbury's records and is not intended to provide a full, complete or totally accurate assessment of the site. It is provided on the basis that Environment Canterbury makes no warranty or representation regarding the reliability, accuracy or completeness of the information provided or the level of contamination (if any) at the relevant site or that the site is suitable or otherwise for any particular purpose. Environment Canterbury accepts no responsibility for any loss, cost, damage or expense any person may incur as a result of the use, reference to or reliance on the information contained in this report.

Any person receiving and using this information is bound by the provisions of the Privacy Act 1993.

Listed Land Use Register

What you need to know

What is the Listed Land Use Register (LLUR)?

The LLUR is a database that Environment Canterbury uses to manage information about land that is, or has been, associated with the use, storage or disposal of hazardous substances.

Why do we need the LLUR?

Some activities and industries are hazardous and can potentially contaminate land or water. We need the LLUR to help us manage information about land which could pose a risk to your health and the environment because of its current or former land use.

Section 30 of the Resource Management Act (RMA, 1991) requires Environment Canterbury to investigate, identify and monitor contaminated land. To do this we follow national guidelines and use the LLUR to help us manage the information.

The information we collect also helps your local district or city council to fulfil its functions under the RMA. One of these is implementing the National Environmental Standard (NES) for Assessing and Managing Contaminants in Soil, which came into effect on 1 January 2012.

For information on the NES, contact your city or district council.

How does Environment Canterbury identify sites to be included on the LLUR?

We identify sites to be included on the LLUR based on a list of land uses produced by the Ministry for the Environment (MfE). This is called the Hazardous Activities and Industries List (HAIL)¹. The HAIL has 53 different activities, and includes land uses such as fuel storage sites, orchards, timber treatment yards, landfills, sheep dips and any other activities where hazardous substances could cause land and water contamination.

We have two main ways of identifying HAIL sites:

- We are actively identifying sites in each district using historic records and aerial photographs. This project started in 2008 and is ongoing.
- We also receive information from other sources, such as environmental site investigation reports submitted to us as a requirement of the Regional Plan, and in resource consent applications.

¹ The Hazardous Activities and Industries List (HAIL) can be downloaded from MfE's website www.mfe.govt.nz, keyword search HAIL

How does Environment Canterbury classify sites on the LLUR?

Where we have identified a HAIL land use, we review all the available information, which may include investigation reports if we have them. We then assign the site a category on the LLUR. The category is intended to best describe what we know about the land use and potential contamination at the site and is signed off by a senior staff member.

Please refer to the Site Categories and Definitions factsheet for further information.

What does Environment Canterbury do with the information on the LLUR?

The LLUR is available online at www.llur.ecan.govt.nz. We mainly receive enquiries from potential property buyers and environmental consultants or engineers working on sites. An inquirer would typically receive a summary of any information we hold, including the category assigned to the site and a list of any investigation reports.

We may also use the information to prioritise sites for further investigation, remediation and management, to aid with planning, and to help assess resource consent applications. These are some of our other responsibilities under the RMA.

If you are conducting an environmental investigation or removing an underground storage tank at your property, you will need to comply with the rules in the Regional Plan and send us a copy of the report. This means we can keep our records accurate and up-to-date, and we can assign your property an appropriate category on the LLUR. To find out more, visit www.ecan.govt.nz/HAIL.

My land is on the LLUR – what should I do now?

IMPORTANT! Just because your property has a land use that is deemed hazardous or is on the LLUR, it doesn't necessarily mean it's contaminated. The only way to know if land is contaminated is by carrying out a detailed site investigation, which involves collecting and testing soil samples.

You do not need to do anything if your land is on the LLUR and you have no plans to alter it in any way. It is important that you let a tenant or buyer know your land is on the Listed Land Use Register if you intend to rent or sell your property. If you are not sure what you need to tell the other party, you should seek legal advice.

You may choose to have your property further investigated for your own peace of mind, or because you want to do one of the activities covered by the National Environmental Standard for Assessing and Managing Contaminants in Soil. Your district or city council will provide further information.

If you wish to engage a suitably qualified experienced practitioner to undertake a detailed site investigation, there are criteria for choosing a practitioner on www.ecan.govt.nz/HAIL.

I think my site category is incorrect – how can I change it?

If you have an environmental investigation undertaken at your site, you must send us the report and we will review the LLUR category based on the information you provide. Similarly, if you have information that clearly shows your site has not been associated with HAIL activities (eg. a preliminary site investigation), or if other HAIL activities have occurred which we have not listed, we need to know about it so that our records are accurate.

If we have incorrectly identified that a HAIL activity has occurred at a site, it will be not be removed from the LLUR but categorised as Verified Non-HAIL. This helps us to ensure that the same site is not re-identified in the future.

IMPORTANT!

The LLUR is an online database which we are continually updating. A property may not currently be registered on the LLUR, but this does not necessarily mean that it hasn't had a HAIL use in the past.

Sheep dipping (ABOVE) and gas works (TOP) are among the former land uses that have been identified as potentially hazardous. (Photo above by Wheeler & Son in 1987, courtesy of Canterbury Museum.)

Listed Land Use Register

Site categories and definitions

When Environment Canterbury identifies a Hazardous Activities and Industries List (HAIL) land use, we review the available information and assign the site a category on the Listed Land Use Register. The category is intended to best describe what we know about the land use.

If a site is categorised as **Unverified** it means it has been reported or identified as one that appears on the HAIL, but the land use has not been confirmed with the property owner.

If the land use has been confirmed but analytical information from the collection of samples is not available, and the presence or absence of contamination has therefore not been determined, the site is registered as:

Not investigated:

- A site whose past or present use has been reported and verified as one that appears on the HAIL.
- The site has not been investigated, which might typically include sampling and analysis of site soil, water and/or ambient air, and assessment of the associated analytical data.
- There is insufficient information to characterise any risks to human health or the environment from those activities undertaken on the site. Contamination may have occurred, but should not be assumed to have occurred.

If analytical information from the collection of samples is available, the site can be registered in one of six ways:

At or below background concentrations:

The site has been investigated or remediated. The investigation or post remediation validation results confirm there are no hazardous substances above local background concentrations other than those that occur naturally in the area. The investigation or validation sampling has been sufficiently detailed to characterise the site.

Below guideline values for:

The site has been investigated. Results show that there are hazardous substances present at the site but indicate that any adverse effects or risks to people and/or the environment are considered to be so low as to be acceptable. The site may have been remediated to reduce contamination to this level, and samples taken after remediation confirm this.

Managed for:

The site has been investigated. Results show that there are hazardous substances present at the site in concentrations that have the potential to cause adverse effects or risks to people and/or the environment. However, those risks are considered managed because:

- the nature of the use of the site prevents human and/or ecological exposure to the risks; and/or
- the land has been altered in some way and/or restrictions have been placed on the way it is used which prevent human and/or ecological exposure to the risks.

Partially investigated:

The site has been partially investigated. Results:

- demonstrate there are hazardous substances present at the site; however, there is insufficient information to quantify any adverse effects or risks to people or the environment; or
- do not adequately verify the presence or absence of contamination associated with all HAIL activities that are and/or have been undertaken on the site.

Significant adverse environmental effects:

The site has been investigated. Results show that sediment, groundwater or surface water contains hazardous substances that:

- have significant adverse effects on the environment; or
- are reasonably likely to have significant adverse effects on the environment.

Contaminated:

The site has been investigated. Results show that the land has a hazardous substance in or on it that:

- has significant adverse effects on human health and/or the environment; and/or
- is reasonably likely to have significant adverse effects on human health and/or the environment.

If a site has been included incorrectly on the Listed Land Use Register as having a HAIL, it will not be removed but will be registered as:

Verified non-HAIL:

Information shows that this site has never been associated with any of the specific activities or industries on the HAIL.
