Dear Sir/Madam

Thank you for submitting your property enquiry from our Listed Land Use Register (LLUR). The LLUR holds information about sites that have been used or are currently used for activities which have the potential to cause contamination.

The LLUR statement shows the land parcel(s) you enquired about and provides information regarding any potential LLUR sites within a specified radius.

Please note that if a property is not currently registered on the LLUR, it does not mean that an activity with the potential to cause contamination has never occurred, or is not currently occurring there. The LLUR database is not complete, and new sites are regularly being added as we receive information and conduct our own investigations into current and historic land uses.

The LLUR only contains information held by Environment Canterbury in relation to contaminated or potentially contaminated land; additional relevant information may be held in other files (for example consent and enforcement files).

Please contact Environment Canterbury if you wish to discuss the contents of this property statement.

Yours sincerely

Contaminated Sites Team

**Combined Preliminary and Detailed Environmental Site Investigation - 174 Hamptons Road
Prebbleton**

ENGEO - Detailed Site Investigation

23 Oct 2020

Summary of investigation(s):

Site history: According to historical aerial imagery, 174 Hamptons Road, Prebbleton (the site) was mostly in pasture from the 1940s to present day aside from a dwelling and associated farm sheds in the southeastern portion of the site. A glasshouse was constructed in the 1980s.

INV363753 - Combined Preliminary and Detailed Environmental Site Investigation - 174 Hamptons Road Prebbleton (ENGEO Ltd, 2020)

Investigation objective: ENGEO Ltd were engaged in 2020 to undertake a Detailed Site Investigation (DSI) of the site in response to the proposal to subdivide for residential land use. The purpose of the DSI was to determine if any contaminants of concern were present within the area of investigation, and if so, whether they posed a risk to human health under the proposed land use. The previous site owner advised there were courgettes grown in the glasshouse and the paddocks on site were used for cropping. The loading pen was not used for spraying or drenching sheep. Eight soil samples (S1-S8) were collected from 0.0-0.3 m depth around the glasshouse and chemical storage areas and analysed for trace elements and organochlorine pesticides (OCPs). Three samples (S9-S11) were collected from an area of demolished sheds and analysed for lead and asbestos. A soil sample (S12) was collected from a burn pile for trace element and polycyclic aromatic hydrocarbon (PAH) analysis. Two samples (S13 and S14) were collected from soil adjacent to the dwelling and water tank for lead analysis.

Results: The analytical results were compared with regional background criteria and Ministry for Environment (MfE) Soil Contaminant Standards (SCS) for protection of human health in a residential 10% produce land use scenario. Soil samples S9, S13 and S14 identified elevated lead in exceedance of the Residential SCS. Four delineation soil samples were collected around S9 and twelve delineation samples around S13 and S14 adjacent to the

dwelling. Two samples from the glasshouse area reported arsenic above the Residential SCS. Sample S12 from the burn area detected arsenic, chromium and lead above the residential SCS.

INV363792 - Remedial Action Plan - 174 Hamptons Road, Prebbleton (ENGEO Ltd, 2023)

A Remedial Action Plan (RAP) was prepared to address trace element contaminated soils in five areas of the site and set out a methodology to mitigate potential human health risk from the disturbance of contaminated soil. The areas identified in the DSI included Area 1 – small glasshouse; Area 2 – larger glasshouse; Area 3 – former building; and Area 4 – Burn pile and; Area 5 – lead around dwelling. The RAP proposed to excavate and remove approximately 173 cubic meters of contaminated soil offsite. Remaining soil will undergo verification soil sampling to demonstrate that the remaining soil is suitable for residential land use.

INV401338 - Soil Validation Report 174 Hamptons Road, Prebbleton, Christchurch (ENGEO Ltd, 2024)

Investigation objective: ENGEO were engaged to report on the results of remediation activities and conduct validation of remediation of trace element contaminated soil at the site. Soil was excavated in areas 1-4 where trace elements exceeded the residential SCS. A total of 154.4 tonnes was removed from the site and transported to Enviro NZ and Frews Hororata. An initial round of 23 validation soil samples were collected from the walls and base of excavations. Remedial work around Area 5, the existing dwelling did not occur.

Results: Each of the areas 1-4 required further excavation following results exceeding Residential SCS. A further 15 validation soil samples were collected and found trace elements to be below Residential SCS.

Conclusion: The site SN119201 (Areas 1-4) has been categorised as "Below guideline values – Residential"

The site SN363791 (existing dwelling) has been categorised as "Contaminated - Residential"

Justification: According to the information at hand, soil exceeding the residential SCS guidelines identified in the DSI has been removed from Areas 1-4. The validation soil sampling demonstrated the site is suitable for residential land use. Contaminated soil remains around the existing dwelling and is expected to be remediated at a later stage.

Disclaimer

The enclosed information is derived from Environment Canterbury's Listed Land Use Register and is made available to you under the Local Government Official Information and Meetings Act 1987.

The information contained in this report reflects the current records held by Environment Canterbury regarding the activities undertaken on the site, its possible contamination and based on that information, the categorisation of the site. Environment Canterbury has not verified the accuracy or completeness of this information. It is released only as a copy of Environment Canterbury's records and is not intended to provide a full, complete or totally accurate assessment of the site. It is provided on the basis that Environment Canterbury makes no warranty or representation regarding the reliability, accuracy or completeness of the information provided or the level of contamination (if any) at the relevant site or that the site is suitable or otherwise for any particular purpose. Environment Canterbury accepts no responsibility for any loss, cost, damage or expense any person may incur as a result of the use, reference to or reliance on the information contained in this report.

Any person receiving and using this information is bound by the provisions of the Privacy Act 1993.

Listed Land Use Register

What you need to know

What is the Listed Land Use Register (LLUR)?

The LLUR is a database that Environment Canterbury uses to manage information about land that is, or has been, associated with the use, storage or disposal of hazardous substances.

Why do we need the LLUR?

Some activities and industries are hazardous and can potentially contaminate land or water. We need the LLUR to help us manage information about land which could pose a risk to your health and the environment because of its current or former land use.

Section 30 of the Resource Management Act (RMA, 1991) requires Environment Canterbury to investigate, identify and monitor contaminated land. To do this we follow national guidelines and use the LLUR to help us manage the information.

The information we collect also helps your local district or city council to fulfil its functions under the RMA. One of these is implementing the National Environmental Standard (NES) for Assessing and Managing Contaminants in Soil, which came into effect on 1 January 2012.

For information on the NES, contact your city or district council.

How does Environment Canterbury identify sites to be included on the LLUR?

We identify sites to be included on the LLUR based on a list of land uses produced by the Ministry for the Environment (MfE). This is called the Hazardous Activities and Industries List (HAIL)¹. The HAIL has 53 different activities, and includes land uses such as fuel storage sites, orchards, timber treatment yards, landfills, sheep dips and any other activities where hazardous substances could cause land and water contamination.

We have two main ways of identifying HAIL sites:

- We are actively identifying sites in each district using historic records and aerial photographs. This project started in 2008 and is ongoing.
- We also receive information from other sources, such as environmental site investigation reports submitted to us as a requirement of the Regional Plan, and in resource consent applications.

¹ The Hazardous Activities and Industries List (HAIL) can be downloaded from MfE's website www.mfe.govt.nz, keyword search HAIL

How does Environment Canterbury classify sites on the LLUR?

Where we have identified a HAIL land use, we review all the available information, which may include investigation reports if we have them. We then assign the site a category on the LLUR. The category is intended to best describe what we know about the land use and potential contamination at the site and is signed off by a senior staff member.

Please refer to the Site Categories and Definitions factsheet for further information.

What does Environment Canterbury do with the information on the LLUR?

The LLUR is available online at www.llur.ecan.govt.nz. We mainly receive enquiries from potential property buyers and environmental consultants or engineers working on sites. An inquirer would typically receive a summary of any information we hold, including the category assigned to the site and a list of any investigation reports.

We may also use the information to prioritise sites for further investigation, remediation and management, to aid with planning, and to help assess resource consent applications. These are some of our other responsibilities under the RMA.

If you are conducting an environmental investigation or removing an underground storage tank at your property, you will need to comply with the rules in the Regional Plan and send us a copy of the report. This means we can keep our records accurate and up-to-date, and we can assign your property an appropriate category on the LLUR. To find out more, visit www.ecan.govt.nz/HAIL.

My land is on the LLUR – what should I do now?

IMPORTANT! Just because your property has a land use that is deemed hazardous or is on the LLUR, it doesn't necessarily mean it's contaminated. The only way to know if land is contaminated is by carrying out a detailed site investigation, which involves collecting and testing soil samples.

You do not need to do anything if your land is on the LLUR and you have no plans to alter it in any way. It is important that you let a tenant or buyer know your land is on the Listed Land Use Register if you intend to rent or sell your property. If you are not sure what you need to tell the other party, you should seek legal advice.

You may choose to have your property further investigated for your own peace of mind, or because you want to do one of the activities covered by the National Environmental Standard for Assessing and Managing Contaminants in Soil. Your district or city council will provide further information.

If you wish to engage a suitably qualified experienced practitioner to undertake a detailed site investigation, there are criteria for choosing a practitioner on www.ecan.govt.nz/HAIL.

I think my site category is incorrect – how can I change it?

If you have an environmental investigation undertaken at your site, you must send us the report and we will review the LLUR category based on the information you provide. Similarly, if you have information that clearly shows your site has not been associated with HAIL activities (eg. a preliminary site investigation), or if other HAIL activities have occurred which we have not listed, we need to know about it so that our records are accurate.

If we have incorrectly identified that a HAIL activity has occurred at a site, it will be not be removed from the LLUR but categorised as Verified Non-HAIL. This helps us to ensure that the same site is not re-identified in the future.

IMPORTANT!

The LLUR is an online database which we are continually updating. A property may not currently be registered on the LLUR, but this does not necessarily mean that it hasn't had a HAIL use in the past.

Sheep dipping (ABOVE) and gas works (TOP) are among the former land uses that have been identified as potentially hazardous. (Photo above by Wheeler & Son in 1987, courtesy of Canterbury Museum.)

Listed Land Use Register

Site categories and definitions

When Environment Canterbury identifies a Hazardous Activities and Industries List (HAIL) land use, we review the available information and assign the site a category on the Listed Land Use Register. The category is intended to best describe what we know about the land use.

If a site is categorised as **Unverified** it means it has been reported or identified as one that appears on the HAIL, but the land use has not been confirmed with the property owner.

If the land use has been confirmed but analytical information from the collection of samples is not available, and the presence or absence of contamination has therefore not been determined, the site is registered as:

Not investigated:

- A site whose past or present use has been reported and verified as one that appears on the HAIL.
- The site has not been investigated, which might typically include sampling and analysis of site soil, water and/or ambient air, and assessment of the associated analytical data.
- There is insufficient information to characterise any risks to human health or the environment from those activities undertaken on the site. Contamination may have occurred, but should not be assumed to have occurred.

If analytical information from the collection of samples is available, the site can be registered in one of six ways:

At or below background concentrations:

The site has been investigated or remediated. The investigation or post remediation validation results confirm there are no hazardous substances above local background concentrations other than those that occur naturally in the area. The investigation or validation sampling has been sufficiently detailed to characterise the site.

Below guideline values for:

The site has been investigated. Results show that there are hazardous substances present at the site but indicate that any adverse effects or risks to people and/or the environment are considered to be so low as to be acceptable. The site may have been remediated to reduce contamination to this level, and samples taken after remediation confirm this.

Managed for:

The site has been investigated. Results show that there are hazardous substances present at the site in concentrations that have the potential to cause adverse effects or risks to people and/or the environment. However, those risks are considered managed because:

- the nature of the use of the site prevents human and/or ecological exposure to the risks; and/or
- the land has been altered in some way and/or restrictions have been placed on the way it is used which prevent human and/or ecological exposure to the risks.

Partially investigated:

The site has been partially investigated. Results:

- demonstrate there are hazardous substances present at the site; however, there is insufficient information to quantify any adverse effects or risks to people or the environment; or
- do not adequately verify the presence or absence of contamination associated with all HAIL activities that are and/or have been undertaken on the site.

Significant adverse environmental effects:

The site has been investigated. Results show that sediment, groundwater or surface water contains hazardous substances that:

- have significant adverse effects on the environment; or
- are reasonably likely to have significant adverse effects on the environment.

Contaminated:

The site has been investigated. Results show that the land has a hazardous substance in or on it that:

- has significant adverse effects on human health and/or the environment; and/or
- is reasonably likely to have significant adverse effects on human health and/or the environment.

If a site has been included incorrectly on the Listed Land Use Register as having a HAIL, it will not be removed but will be registered as:

Verified non-HAIL:

Information shows that this site has never been associated with any of the specific activities or industries on the HAIL.
