## Land Use Resource Consent Information

### Land Use Resource Consents on Subject Property

Property No	Application No	Description	Decision	Date
33270	RCLU19/0056	To construct an accessory building in front of the principal dwelling and for the dwelling to breach the height recession plane	Completed	17/06/2019
33270	RCLU17/0084	(Notified) To carry out earthworks on site	Approved	10/07/2018

### Land Use Resource Consents on Adjoining Properties

Property No	Application No	Description	Decision	Date
36320	RCLU18/0048V1	Variation of condition - Amend existing RCLU18/0048 - Extension of existing garage by 21m <sup>2</sup> bringing total garage area from 49m <sup>2</sup> to 70m <sup>2</sup> .	Approved	06/08/2025
36320	RCLU18/0048	To build a garage in front of the principal dwelling.	Monitoring	17/07/2018
36320	RCLU17/0038	To carry out earthworks on site.	Completed	09/06/2017

### Land Use Resource Consents on other Nearby Properties (within 50m of subject property)

Property No	Application No	Description	Decision	Date
33272	RCLU17/0065	For residential site formation of earthworks	Completed	08/08/2017

### Decision Terms

Approved - Consent approved

Declined - Consent not approved

Monitoring - consent approved and consent conditions currently being monitored

Completed - consent conditions met

- Depression Areas less than 300mm
- 5Ha Overland Flow Path
- 2Ha Overland Flow Path
- 1Ha Overland Flow Path

**Property 33270  
 Overland Flow  
 Paths Map**

## Guidance Note to Overland Flow Path Disclaimer

The overland flow path represents the predicted path of storm water associated with an unusually large rain event and has been derived with all above ground structures stripped from the LiDAR. Some of those structures (e.g. fences and buildings) may divert the overland flow path, producing delineations that differ to those presented in the information. Any rain event that exceeds the capacity of the Council's stormwater infrastructure will cause varying levels of inundation.

### Assumptions

As no two rainfall events are the same a theoretical uniform rain event was assumed for the analysis in order to simulate a rainfall event that would constitute an unusually large rain event. The storm water network would be unavailable during the event owing to inundation.

The above assumptions may not reflect the catchment behaviour during an actual rain event of a similar magnitude owing to rainfall duration and concentration; e.g. some areas may flood in a specific event but not in a subsequent large event and vice versa.

Accordingly, while realistic in some areas it may be over-conservative in other areas depending on the interaction between the above ground conditions, and the storm water network. The full effect of an unusually large rain event has not yet been analysed.

The presence of an overland flow path and an extreme rain event does not necessarily equate to a **flooding event** which means "an overflow of storm water from Council's storm water system that enters a habitable floor<sup>2</sup>".

In order to understand **flooding events** Council is using the overland flow path information to do further analysis on water levels and flow velocities to ascertain the number of habitable floors that are at risk; that information is not yet available.

### Recommendation

Council recommends further overland flow path information enquiry be made with Council's Infrastructure Division or with a qualified professional.

1. LIDAR, which stands for *Light Detection and Ranging*, is a remote sensing method that uses light in the form of a pulsed laser to measure ranges (variable distances) to the Earth. These light pulses (combined with other data recorded by the airborne system) generate precise, three-dimensional information about the shape of the Earth and its surface characteristics.
2. Depression areas may only partially fill during an unusually large rain event.

Scale 1: 2000

Tuesday, March 10, 2026

- High Liquefaction
- Low Liquefaction
- Moderate Liquefaction

**Property 33270  
 Liquefaction  
 Map**

## Guidance Note to Liquefaction

### Explanation for Liquefaction Susceptibility rating:

The data in this LIM regarding liquefaction, is based on a study completed by GNS (Institute of Geological and Nuclear Sciences).

The table below explains the potential effects of liquefaction during various earthquake intensities.

Susceptibility to Liquefaction	Felt Effects of Earthquakes of Varying Intensities Modified Mercalli (MM) Scale
Low Susceptibility	MM9 - minor subsidence, isolated cracks and fissures
Moderate Susceptibility	MM8 – minor subsidence, isolated cracks and fissures MM9 – moderate subsidence, minor cracks and fissures
High Susceptibility	MM7 – minor subsidence, isolated cracks and fissures MM8 – moderate subsidence, minor cracks and fissures MM9 – major subsidence, large cracks and fissures

The [Modified Mercalli \(MM\) Scale](#) is an indicator of an earthquake's effects on people and their environment. It shows the relationship between the strength of shaking at ground level and the degree of damage. See below for further information.

Category of Earthquake	Definition of Human Response and Consequence
MM1: Imperceptible	Barely sensed by only a few people
MM2: Scarcely felt	Felt only by a few people at rest in houses or on upper floors.
MM3: Weak	Felt indoors as a light vibration. Hanging objects may swing slightly.
MM4: Largely observed	Generally noticed indoors, but not outside, as a moderate vibration or jolt. Light sleepers may be awakened. Walls may creak, and glassware, crockery, doors or windows rattle.
MM5: Strong	Generally felt outside and by almost everyone indoors. Most sleepers are awakened and a few people alarmed. Small unstable objects are shifted or overturned, and pictures knock against the wall. Some glassware and crockery may break, and loosely secured doors may swing open and shut.
MM6: Slightly damaging	Felt by all. People and animals are alarmed, and many run outside. Walking steadily is difficult. Furniture and appliances may move on smooth surfaces, and objects fall from walls and shelves. Glassware and crockery break. Slight non-structural damage to buildings may occur
MM7: Damaging	General Alarm. People experience difficulty standing. Furniture and appliances are shifted. Substantial damage to fragile or unsecured objects. A few weak buildings are destroyed.
MM8: Heavily damaging	Alarm may approach panic. A few buildings are damaged and some weak buildings are destroyed
MM9: Destructive	Some buildings are damaged and many weak buildings are destroyed.
