
RESTRICTED ACCESS

☐ TO PART(S) OF THE BUILDING ONLY

☑ SHORT TERM ENTRY ONLY

☐ Access to be supervised by a person authorised by the issuing Territorial Authority

There has been a quick visual assessment of this building:

- [illegible] damaged and is unsafe to occupy or use/inhabit
- Entry only at own risk
- [illegible] this placard does not change this assessment

Description of hazard observed: DWELLING INUNDATED WITH FLOODWATER

Restricted areas are: ALL

Restrictions on use:

- ☑ Removal of essential documents/valuables only
- ☑ Removal of pressers
- ☐ Other:

Plan attached showing restricted areas

Building Name and Address: # 86 ANZAC PARADE, WANGANUI

This building has been subject to a rapid assessment:

- ☑ Exterior Only
- ☐ Exterior and Interior

Assessor ID: TIM TAYLOR

Date: 24/6/15 Time: 09:15

This placard has been placed on behalf of the Civil Defence Emergency Management Controller under the authority of the Civil Defence Emergency Management Act 2002.

FOOD SAFETY AFTER A FLOOD

Floodwaters can carry a wide range of pollutants including chemicals and micro-organisms ('germs', 'bugs' that can cause disease). These pollutants originate from the ground surface, septic tanks, sewerage systems and industrial sites. They can contaminate food, food containers, utensils and any other articles and surfaces that come into contact with floodwaters.

- THOROUGHLY WASH cooking, eating, and other kitchen containers and utensils in hot, soapy water if they have been covered by floodwaters. Rinse thoroughly in safe water, then disinfect by immersing for one minute in a solution of 500 mls (about two cups) of household bleach in 10 litres of water. Rinse again in safe water. Alternatively, boil all dishes/utensils for three minutes.
- THOROUGHLY WASH food preparation surfaces, e.g. bench tops, with hot, soapy water if they have been covered by floodwaters. Rinse thoroughly in safe water, then disinfect by applying a solution of 500 mls (about two cups) of household bleach in 10 litres of water. Keep windows and doors open during this treatment and wear protective clothing. Leave wet for at least 30 minutes, then rinse with clean water. Allow to air-dry.
- DESTROY all unpackaged food and food items packed in paper, cardboard or non-waterproof containers that have been exposed directly to the floodwater. Food containers that are not waterproof include those with screw-caps, snap lids and crimped caps (water can seep around the lids and debris can lodge between the lid and the container). It is safer to get rid of all home preserves as these are a higher risk than commercial items.
- SAVE foods in waterproof, airtight containers (e.g. cans) that have been in floodwater, but make sure they are thoroughly cleaned before opening by:
  - removing the labels if possible (can harbour dirt and micro-organisms)
  - washing and scrubbing in warm water which contains soap or detergent, then rinsing in clean water
  - soaking for at least one minute in a solution of 500 mls (two cups) of household bleach mixed with 10 litres of water; then rinsing in clean water from a safe water supply
- DO write on the contents of containers if labels are removed during washing or damaged so you know what is inside them.
- DO NOT use packaged or canned food if it has been punctured or is bulging or leaking or the top has popped up. Throw out any canned foods dented on the side or along the top or bottom seams.
- DO wash and disinfect your can opener before using.
- DO NOT eat produce from your garden that has been in contact with floodwater.
- DISCARD fridges and freezers that have been submerged in floodwaters or enough moisture from liquefied food has reached the insulation inside.
